GEO & AI VISIBILITY AUDIT

Example Corp

July 2026

Perplexity

ChatGPT

Gemini

Claude

CONFIDENTIAL

Methodology

and what we measured.

We tested 24 queries across four AI search platforms (Perplexity, ChatGPT, Gemini and Claude) for Example Corp and 2 competitors — 288 data points in total. Each response was scored for whether the brand appeared, how it was described, and how prominently it featured relative to competitors.

Sample depth: 1 samples per platform-query combination (Fast).

Glossary

Visibility %	An absolute footprint measure: out of all platform-query combinations tested in a topic, the percentage in which the brand appeared.
Sentiment when mentioned	How AI engines describe the brand when it does appear, broken down into positive, neutral and negative.
Share of Voice	A competitive measure: of all brand mentions on a topic across the client and competitors, the percentage owned by each entity.
Strong / Partial / Weak	Per-query visibility on each platform: Strong = brand named directly, Partial = domain cited only, Weak = absent.
Tier 1 — Category Anchor	Broad category with buyer / ranking intent ('best', 'top', 'leading'), zero narrowing dimensions. Tests whether the brand surfaces when buyers ask AI assistants to rank the category.
Tier 2 — Category + 1 Layer	Category plus one specificity dimension — geography, audience, occasion, duration, or sub-category.
Tier 3 — Long-Tail Specificity	Category plus two or more specificity layers, grounded in real customer language and the client's actual portfolio.
Tier 4 — Brand & Decisional	Direct brand or competitor named in the query. Specificity is irrelevant; intent is unambiguous.

PROMINENCE — where you ranked vs competitors

- On "sample query 2 for competitor comparison", Example Corp led the AI conversation.

EXECUTIVE SUMMARY

What this means for your business.

OVERALL

Example Corp demonstrates moderate AI visibility across the four major generative search platforms, with notable strength on Gemini and Claude but significant gaps on ChatGPT. Across the six topic groups audited, the brand consistently appears in Brand Search and Core Service queries, but is frequently displaced by Competitor A on awareness and comparison queries. Overall sentiment is positive when the brand does appear, with language markers including 'trusted', 'premium', and 'recommended' surfacing across multiple platforms.

STRENGTHS

Gemini surfaces Example Corp as a leading option across 5 of 6 topic groups, with strong authority language and first-position mentions on high-intent queries. Brand Search visibility is robust on all four platforms, indicating that direct brand queries reliably return the company. The brand outperforms Competitor B across 4 of 6 topic groups, establishing a clear positional advantage in this competitive set.

OPPORTUNITIES

ChatGPT represents the single largest visibility gap, with Competitor A capturing top placement on comparison and awareness queries where Example Corp is absent. Industry Presence queries show neutral sentiment (3.0/10) despite strong visibility, suggesting the brand is mentioned without strong endorsement — a content and positioning opportunity. A common brand misspelling causes Gemini to return competitor results, representing a fixable technical GEO leak that could be addressed in the next sprint.
